Mini Project: Unit converter or bill generator

Code

```
print("UNIT CONVERTER")
print("1. Kilometres to Metres")
print("2. Metres to Centimetres")
print("3. Kilograms to Grams")
print("4. Litres to Millilitres")
choice = int(input("Enter your choice: "))
value = float(input("Enter the value: "))
if choice == 1:
    result = value * 1000
    print(value, "kilometres =", result, "metres")
elif choice == 2:
    result = value * 100
    print(value, "metres =", result, "centimetres")
elif choice == 3:
    result = value * 1000
    print(value, "kilograms =", result, "grams")
elif choice == 4:
    result = value * 1000
    print(value, "litres =", result, "millilitres")
else:
    print("Invalid choice")
```

Input/Output

```
PS C:\Users\Keerthana RC\AppData\Local\Programs\Microsoft VS Code> & "C:\Users\Keerthana RC\AppData\Local\Programs\Python\Python313\python.exe" "c:/Users/Ke
erthana RC/unit.py"
UNIT CONVERTER
1. Kilometres to Metres
2. Metres to Centimetres
3. Kilograms to Grams
4. Litres to Millilitres
Enter your choice: 1
Enter the value: 5
5.0 kilometres = 5000.0 metres
PS C:\Users\Keerthana RC\AppData\Local\Programs\Microsoft VS Code>
```
